SODAI
CIRCULAR INNOVATION

Sodai S.p.A. is an environmental engineering and water management company operating in the purification and treatment of primary waters and process fluids sector.

Our clients are offered an integrated **Environmental Service** thanks to our know-how developed and consolidated in **more than 30 years of our experience**.

Our mission is to optimize the **purification efficiency** and solve industrial problems concerning Sustainability. What distinguishes us is our solid reputation and the quality of processes. In 2019 Italtveco was incorporated into our group.

Today **we are present in 28 countries** being proud of having in our portfolio leading companies operating in Oil, Gas and Power sectors, i.e. operating centers of ENI and ENEL where for over 15 years Sodai has owned and managed its water treatment plants in Trenitalia workshops.

**"Strength, heart, ingenuity.
An active and constant
confrontation with the environment,
aimed at pursuing the green spirit
that permeates Sodai's roots."**

Partnership & exclusive

Believing in associative values as a base of the company growth, Sodai is associated with **Assolombarda** and **Assoreca**, members of **Confindustria** (Italian Entrepreneurial Association).

In 2012 Sodai incorporated the **Eco Bio Processing**, a Clean Tech Company specialized in the design and supply of Membrane Separation Systems and the most advanced treatment systems for gaseous waste, waste waters and industrial use processes.

Sodai holds an exclusive **Paques** license, a world leader in anaerobic treatment of high load wastewater and in the de-sulphurization of gases. The exclusive collaboration with Paques allows us to draw on the experience gained in over 40 years of activity in the construction of over 1,200 plants.

Quality, innovation and sustainability

Quality is the synonym of transparency and safety, two fundamental elements for the development of a reliable and satisfying service. Therefore, for several years, quality has meant to us the decrease of environmental risks together with the reduction of production costs.

Certifications

- Certified by SOA, ISO 9001, ISO 14001, ISO 45001.
- National Register Of Environmental Managers Cat.8E.
- Accredited as an official NATO and UN supplier.
- Qualified as a supplier, among others, of the ENI group, Saipem, Enel, Gruppo FS and Leonardo.

Our innovative processes recover raw materials used in production and purified water from the industrial discharges: a new conception of the purification processes with zero impact and a high social and territorial value.

Our circular economy approach has planned "TAKE-MAKE-REUSE" cycles which reduce and transform waste into reusable materials.

The recycling of water is no longer a choice, it is a necessity.

- Low environmental impact.
- Reduction of production costs for clients.
- Recovery of raw materials destined for disposal.
- Low workers & health and safety risks.

Services

Design, realisation and management

01

Tailor-made plants

Sodai deals with the study, design and construction of "Tailor-made" systems, able to respond to the different needs of the customer. Studies, design and realisation of plants able to respond to different needs of the client: desalination, potabilization, purification, water reuse, zero liquid discharge and treatment of process fluids are only a few of Sodai's technologies which the company continues to specialize in.

02

Standard plants

The construction of containerized "Standard" or skid-mounted plants, assembled and tested in our workshop, sent to final destinations and started up with plug&play solutions. The plants present on the world market for many years have had excellent operating results. Modularity , easy installation, fast commissioning, remote monitoring and assistance.

03

Plant Management

Flexibility, technology, competence to ensure a reliable and efficient service H4,7/7 An integrated approach towards environment enables the company to offer a Global Service which optimizes purification efficiency and minimizes management costs Having an only interlocutor whom to entrust the complete responsibility of their plants minimizes risks and guarantees compliance with the regulations.

04

Global service

An only point of reference for all types of water and fluid process treatment, able to offer integrated turnkey solutions for design, construction and management, also in terms of long-term loan/rental. A Company able to replace itself in the civil and penal responsibilities to the Customer, thanks to the taking in charge of the Environmental authorizations.resa

Main references

OIL&GAS

Among the gained experiences in the Oil&Gas sector and the green fuels production, Sodai has designed, constructed and manages up to now the biggest Italian zero discharge purification plant of waste waters deriving from the production of second generation Bioethanol. The plant treats primary and waste waters of the Versalis di Crescentino (VC).

The plant built with new technologies treats 200 m³/h recycling the total amount of water.

TEXTILE INDUSTRY

In the textile sector, Sodai has designed and realised, among others, the waste water purification plant of Alcantara. Thanks to the innovative technologies developed by the R&D Department, the plant ,apart from water, is able to recover caustic soda from the process and return it back into the production thus allowing an important saving of raw materials and water resources.

DESALINATION

Thanks to a continuous research, Sodai can offer the best technological solutions of desalination plants. With an over 30-year-old international experience we have designed and built Inverse Osmosis desalination plants both for sea and salty water among them the Mossi&Ghisolfi plant in Texas for the production of potable and industrial water used for the production of PTA and PET. The plant, built with advanced technology treats 40.000 m³/day.

ROWPU

The ROWPU (*Reverse Osmosis Water Purification Unit*), are containerized systems for potabilization and waste water treatment designated for municipalities and communities or used in emergency camps by Humanitarian Organisations.

The easy installation enables immediate operativity of the plant and its modularity makes a parallel installation possible thus being able to reach a required potential. The plants are equipped with a plumbing and electric system, they are insulated, air-conditioned and with indoor lighting. Sodai has been a supplier of ,amongst others, the US Army since 2003 in Iraq and Afghanistan, the UNO in Central Africa and on loan plants in Italy, South America and East Europe.
